Abdecktücher

Instructions No. 1778

Difficulty: Beginner

Working time: 20 Minutes

Now that the weather is better, barbecue season has finally begun again. That means the most delicious treats are making their way from the kitchen to the table. But to protect food from insects when eating outdoors, plates, cups, and bowls are often covered with plastic wrap. To avoid all that plastic waste afterward, we have a simple solution for you: **tablecloths**!

It does not get any easier than this:

Draw a **circle** on any **fabric**. This circle should be slightly larger than the bowl to be covered. Then cut **out** the circle with a pair of pinking scissors

Now cover your work surface and place the cut-out fabric circle on top. Apply the **Tex Wax** to both sides with a **brush** or **sponge**. The whole thing must then **harden** for about 2 **hours**.

After **Tex Wax** is applied and heated (with a hair dryer or iron), it penetrates the fabric's fibers and transforms the material into a **breathable film**. This film can be shaped using the warmth of your hands. This method allows you to create countless covers for all kinds of cups, bowls, and dishes. **Tip:** Of course, this also works for glasses. Simply cut out the fabric as usual, cut a hole in the center for a straw if needed, and then coat it with the wax. This way, insects won't stand a chance of landing in your drink!

Must Have

TexWax Impregnating Fluid

Fill volume: 250 ml
Food safe

9,95 € (1 l = 39,80 €)
~~RRP 11,90 €~~
