Anleitung für eine leuchtende Pusteblume

Instructions No. 206

This lamp is a real unique and eye-catcher in every living ambience! These instructions will show you how easy it is to turn a light ball into a summery dandelion.

It's that simple

Light globe

Glue the parts of the light ball with the beige Straw silk paper one, cut out cleanly at the edges after drying, then assemble the ball as described in the supplied instructions.

Dandelion

The Terracotta-pots in Beige wipe, allow to dry and fill in with plugging compound. Then cut a Felt round cover for the pot out of green, cut in the middle and stick it on. Now insert the little lights of the light chain into the ball so that the only cable hangs out. Put the round rod into the finished ball and fix it with hot glue.
Florist tape Wrap the stick together with the fairy lights cable around it and then put it in the middle of the pot where you cut it.
Now cut out jagged long leaves from green modelling felt and glue them with hot glue on the pot and around the round stick. The dandelion is ready.

Dandelion

Cut circles of approx. Ø 2 cm from the white one and cut Felt the wire into equally long pieces (depending on how long you want the inflorescences to be). The two wires are glued crosswise to the felt circles with hot glue and then covered with another circle. Then bend the wire ends upwards.
Now cut out Vellum paper small squares, put them together in the middle and glue them Adhesive tape to the wire ends. For an airy effect, cut the transparent

paper squares crisscross from the top after you have joined them with the scissors.
Glue the individual pistils with hot glue on the connectors (rosettes) of the light ball. The illuminated dandelion is ready.
