Casting design heart

Instructions No. 1623

Difficulty: Beginner

Working time: 30 Minutes

The pretty heart with the floral decoration and the inserted tea lights succeeds even untrained people easily and quickly. It is cast with the casting design technique in ceramic optics, the flowers appear as if printed on.

Tealight heart from cast design

For the heart, 1.5 **kg of casting compound** is mixed **to a** creamy mass and filled into the mould. To avoid air bubbles being trapped during the casting process, you should lift the mould immediately after pouring the casting compound and tap the base of the mould lightly several times. After two hours the cast heart can be removed from the mould. The edges of the tea light mould, which looks like ceramic, are softly ground with Sandpaper .

Flower design as printed

The flowers are available as a motif template. Print them out with a laser printer and wait until the colour of the print has dried

The motif is transferred mirror-inverted. It is placed on the heart with the printed side. Then it is printed with the **Transfer Marker** over the white side of the paper, then firmly spread everything on with a wooden stick or the folding axe. Thus the motive is transferred.

Green tea light cut-outs

Paint the tealight recesses with Handicraft paint in may green and white. Finally only put in the tea lights - the loving heart decoration is ready.

Must Have

Casting mould "Heart for tea lights"

Length: 28.5 cm
Width: 20 cm
Material: Plastic

12,99 €
~~RRP 14,90 €~~
