# Illuminated Paper silhouette

**Instructions No. 2867**

Difficulty: Beginner

Working time: 3 Hours

Our finished paper silhouette is a highlight in your four walls. Decorated on a plate and illuminated with a string of lights, it really makes a statement. Let the winter village move in!

First prime the plywood panel with black primer VBS handicraft paint.

Place the VBS Micro-LED-chain of light behind the VBS Paper-"Christmas village" silhouette. Tip: It is best to start at the back of the largest silhouette. This way you won't see the battery compartment later.

Unwrap the chain of light completely. Glue the first light after the battery compartment with hot glue. Then bend the wire with lights the way you want it. In between, fix the wire in place with hot glue. Make sure not to glue the chain of light on too tightly so that the silhouette can still stand up later. You also need to pay attention to the transitions between the silhouettes. Leave approx. 10 cm chain of light free so that you can bend the wire.

Finally, sprinkle organic snow over the Christmas village.
