Modelling vases with glass tubes

Instructions No. 2704

Difficulty: Beginner

Working time: 3 Hours

These decorative and abstract vases are very easy to make yourself. They were modelled out of FIMO and then coloured with different craft colours. A great decoration for the coming spring.

Vases from FIMO

First knead the modelling clay well and then roll it out thinly. Cut long, narrow strips. Use a glass tube to make a hole in each one. Then clean the glass directly.

Now lay the strips sideways and shape them into the desired form. Carefully press the ends together and smooth the area with a modelling tool. Let the mass dry like this.

After the drying time, the vases can be smoothed with sandpaper. The holes for the test tubes can be enlarged a little with the sandpaper if necessary.

Paint the inside of the vases with craft paint. After drying, place the glass tubes and dried flowers.
