Pour your own floating candles

Instructions No. 1759

Difficulty: Beginner

Working time: 1 hour

Candles are a great decoration all year round and always make the atmosphere especially cosy. These pretty **floating candles** don't look only great - they are made in no time at all and are also great as a small present **for a birthday** or just in between.

For the small **floating candles**, put some eco-candle wax granulate **in** a melting pot. Let the wax melt carefully in a water bath. Now **add** some dye granules and mix everything. Fill the liquid colored **wax into the** mold and put the cut wicks into the mold shortly after

As a colourful eye-catcher in our example we have painted the edge of the **zinc bowl** with **IncaGold**. Let the paint dry well afterwards

Finally, fill the zinc bowl with water and let the finished candles float. Optionally you can spread some **petals on the** water.

A small gift with a great effect

Tip: The small candles are also ideal as a small **gift**. Simply wrap Satin ribbon them in a **cellophane bag** with a pretty one - and you have a great present **for** your loved ones.
