Sailboats made of concrete

Instructions No. 1809

Difficulty: Beginner

Working time: 40 Minutes

Even poured concrete objects do not only look very good, the DIY concrete also has a solid weight. The use of concrete art liner gives each sailboat its individual look.

Quickly poured - after drying ideal as outdoor decoration!

Preparation

Draw your personal motif into the sailboat moulds with the concrete art liner. Please note that this must be applied mirror-inverted. The liquid from this liner should dry for about 5 hours.

Casting

The creative concrete is mixed with water to a creamy mass according to the product instructions. Then the casting moulds are filled with the concrete mass. After about 12 hours the sailboats can be removed from their moulds.

Concrete type Contours

The contours created with the Concrete Art Liner are embedded in the concrete like rubber. They can now be removed, residues are "cleanly scratched" with a pointed object.

Creative with colour and paper cord

According to your personal taste, you can now paint your sailboats, and Handicraft paint then decorate them with small decorative pendants and a paper cord.
