Tray made from craft blocks

Instructions No. 3044

Difficulty: Beginner

Working time: 30 Minutes

This **DIY tutorial** shows you how to create a beautiful **wooden tray** quickly and easily. All you need is only **wooden blocks** and glue and you have a beautiful tray.

How to create a great tray from wooden blocks:

For this idea, you will need 19 **craft blocks** made from the wood of your choice. For a smoother surface, you can sand the blocks before gluing them together.

First glue two craft blocks together on the short edge. Repeat this process a further 6 times. You now have 7 elongated craft blocks in front of you. Take two of these long craft blocks and another block and glue them together at right angles so that the long blocks stick to the edge of the short block. You now have the three sides of your tray.

Next comes the **base**: Glue the remaining five extended craft blocks to the side walls from the inside. Leave open spaces between the blocks. Make sure that the distances between these open spaces are the same. Close the

fourth open side section of the tray with another block.

Finally, make the **handle**: to do this, glue two blocks with the short edge and the short sides of another block together to form a right angle. Finally, attach this finished handle to the center of the basket.
